AMCL's Learning & Development program is triple certified

Testimonials

66

AMCL has held multiple on-site training classes including IAM Certificate and Diploma courses, structured training for our C suite, and training for our AM Division on specific areas where we have gone much deeper into how the key concepts of AM are best applied to our assets. They are simultaneously outstanding teachers and practitioners which, in my experience, is exceedingly rare.

I cannot overstate how instrumental I believe these programs are in shaping the future of our organization.

Lou Cripps,

Senior Manager, RTD Denver Asset Management Division

99

BAE SYSTEMS

"The training provided has proved invaluable in ensuring people from different areas and levels or our organization that the learning can deliver to our business."

"The course was enlightening, enjoyable and very relevant to my work. I was extremely impressed with the course delivery and found the personnel and material both excellent."

nationalgrid

"The course content was comprehensive and professionally presented by a highly experienced industry expert. The course content is vital for industry professionals who manage aging infrastructure asset bases."

Balfour Beatty

"The course was informative, well delivered and perfect for my needs. I have learned a large amount in two days that can be applied to our business processes and policies."

Supporting the Strategic Role of L&D

One of L&D's primary responsibilities is to manage the development of people – and to do so in a way that supports the other key business priorities. L&D's strategic role spans eight key areas.

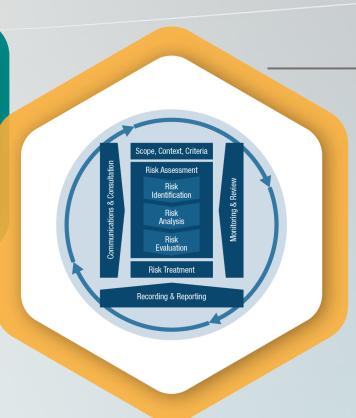

Incorporating the Best in Class Global Management Standards

ISO 55000

The ISO 55001 management system provides a framework to establish Asset Management policies, objectives, processes and governance, and facilities an organization's achievement of its strategic goals. ISO 55001 utilizes a structured, effective and efficient process that drives continual improvement and on-going value creation by managing asset-related cost, performance and risk.

ISO 31000

ISO 31000, Risk management – Guidelines, provides principles, a framework and a process for managing risk. It can be used by any organization regardless of its size, activity or sector.

Using ISO 31000 can help organizations increase the likelihood of achieving objectives, improve the identification of opportunities and threats and effectively allocate and use resources for risk treatment.

Helping you transform to proactive long-term strategies

AMCL's AM 4.0 Enterprise L&D Program can help an organization transition from a culture of short-term / reactive decision making to one of long-term / proactive and all the benefits that will come from this.

From This

To This

Daily Service

Performance is judged based on short term delivery.

Age

Asset replacement is undertaken based on the age of the asset in relation to it's design life.

Up-front Cost

Investment decisions are judged on their up-front cost with lowest priced solutions chosen.

Maintenance

Maintenance is delivered based on manufacturers recommendations irrespective of the criticality of the function.

Local Expertise

There is a high reliance on the expertise of the team that operate and maintain the infrastructure.

Reactive

Waiting for events and breakdowns to occur and reacting to them.

Long-term Performance

Performance is measured against the organization objectives and evaluated over the long term.

Condition & Risk

Asset replacement is undertaken based on condition and risk.

Whole-life Cost

Investments decisions are made based on the whole life cost, rather than just the up-front cost.

Lifecycle Management

Balanced decisions are made across the organization and throughout all lifecycle stages of the organization portfolio.

Integration

The whole organization works together consistently to deliver outcomes.

Proactive

The organization has a long term plan and sticks to it.

Practical guidance to drive capability improvement across the entire enterprise

AMCL's AM 4.0 Enterprise L&D Program is centered on the AM 4.0 Framework. The high performance, customized framework provides asset intensive organizations with a means of aligning investment decisions with customer expectations and provide an end-to-end process that helps remove silos.

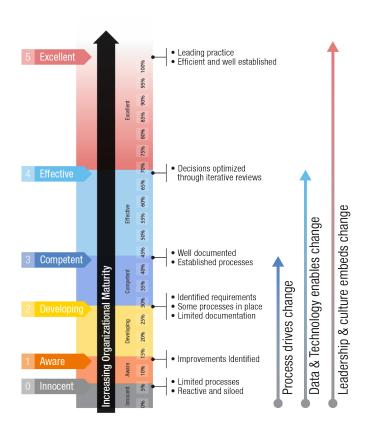

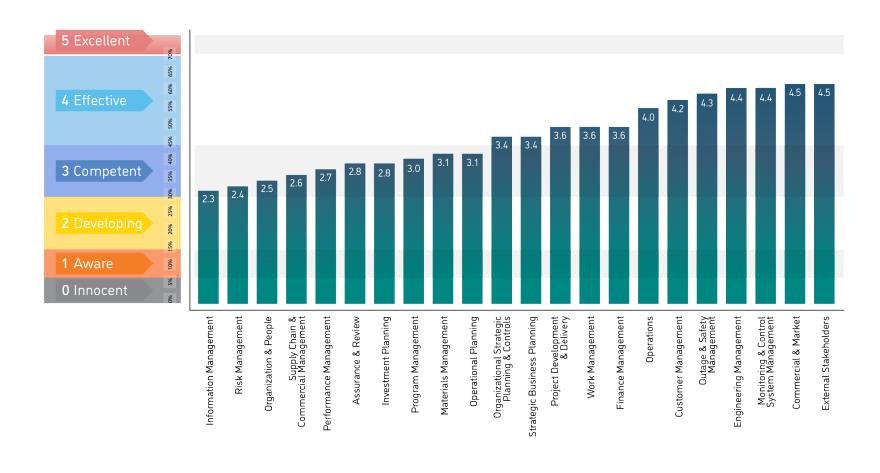

Focusing on the most important areas of capability for your enterprise

We customize your L&D roadmap based on a diagnostic of your current capabilities – across the organization – and focus on those areas which are prioritized by management to deliver capability building where it matters most.

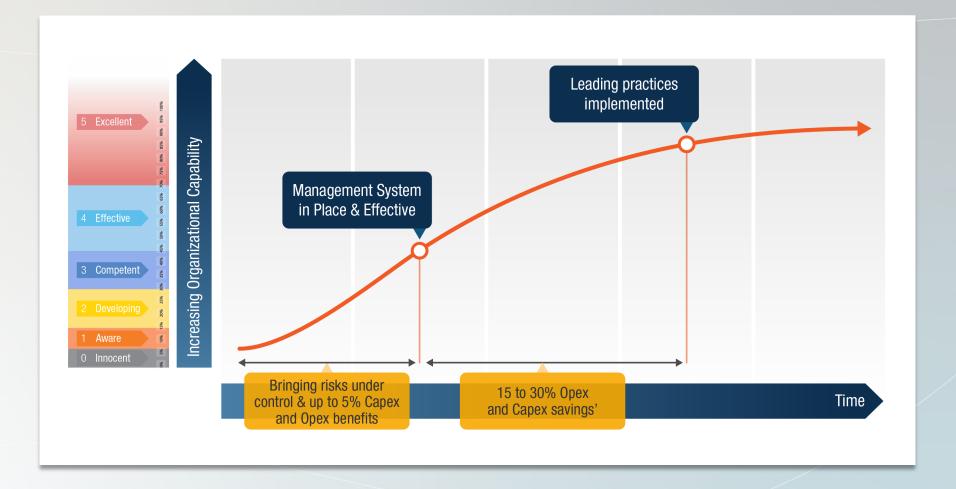

Practical guidance to drive capability improvement across the entire enterprise

Extensive research has evidenced significant bottom line benefits can be delivered through Upskilling and Reskilling. At the start of the journey, many of the benefits are secured by bringing risks under better control.

Soon thereafter, organizational alignment is improved through the deployment of an effective management system and some bottom-line benefits are also secured.

Once the key management system frameworks are in place, leveraging the AM 4.0 Framework yields even greater benefits to stakeholder returns through better alignment of expenditure decision making with stakeholders' expectations.

Customized Learning Journeys = Maximized Benefits

AMCI has created a broad range of modular courses that are customized for each learner and department within an organization.

Practitioner

Advanced

De-Risking Major Capital Programs

Our customized learning journeys are developed through proven course modules and expert trainers.
